3D Inspection and AI Automation Advances from +Vantage

This month, we're taking a closer look at vision inspection systems, and how **Industry 4.0 impacts this area of the factory structure**. As artificial intelligence and deep learning becomes more accessible, vision inspection systems are receiving their own impressive applications. As quoted in one of our featured articles below, "Real-world applications of deep learning include detecting complex surface and cosmetic defects, such as scratches and dents on reflective or turned surfaces."

On the +Vantage blog, we're going deeper into some of the features and benefits of **Automated High-Speed Inspection Systems**. Also, we share our insights on how Automation Systems & Equipment are taking massive strides with Industry 4.0, and how these elements can be successfully integrated into your workplace to help you to realize your full productive potential.
